PROFESSIONAL SUMMARY

Software Developer with 2+ years of experience building production-grade SaaS applications using React.js, TypeScript, and Node.js. Specialized in scalable frontend architecture, performance optimization, and secure REST API integration. Experienced in multi-tenant systems, role-based access control, and Agile delivery cycles, contributing to stable and maintainable enterprise applications.

SKILLS

- **Frontend:** HTML, CSS, SCSS, JavaScript, TypeScript, React.js, Redux Toolkit, Bootstrap, MUI, Tailwind CSS, GSAP, Three.js, React Three Fiber.
- **Backend:** Node.js, Express.js, MongoDB, MySQL, Java (J2EE), Spring Boot.
- **Testing & Automation:** Playwright, Jest, React Testing Library.
- **Tools & Version Control:** Git, GitHub, Bitbucket, VS Code.

WORK EXPERIENCE

Ramansh Engineering | Associate Software Developer | Sep 2024 –Present

- Developed and maintained React.js modules for production applications, focusing on responsive UI, scalable architecture, and performance optimization.
- Built modular, reusable component structures and optimized state management using Redux Toolkit to handle complex UI flows and minimize unnecessary re-renders.
- Collaborated closely with backend teams to streamline REST API integrations, improving data flow efficiency and overall application responsiveness.
- Diagnosed and resolved production-level frontend issues, enhancing application stability and reducing recurring user-reported defects.
- Contributed to sprint planning, feature estimation, release cycles, and implemented unit/integration testing using Jest and React Testing Library to ensure reliable deployments.

Corusview IT Services | Associate Software Developer | Sep 2023 – Aug 2024

- Delivered scalable frontend features for SaaS-based applications using React.js and TypeScript, ensuring maintainable and modular component architecture.

- Identified and resolved performance bottlenecks using Chrome DevTools and profiling tools, optimizing API integration logic and reducing redundant re-renders to improve runtime efficiency.
 - Modernized legacy code modules through structured refactoring, enhancing readability, maintainability, and reducing technical debt.
 - Implemented secure API authorization workflows within administrative modules to ensure controlled and compliant data access.
 - Participated in structured code reviews and collaborated with cross-functional teams to align frontend implementation with design, backend, and business requirements.
-

SELECTED ENGINEERING PROJECTS

Multi-Tenant SaaS Career Portal

(React.js | Node.js | Express.js | MySQL | JWT | Role-Based Access Control)

- Designed and developed a multi-tenant SaaS career portal enabling universities to operate independent job platforms under unique URLs with isolated data management.
- Implemented role-based access control (Super Admin, University Admin, Job Seeker) with JWT-based authentication and secure API authorization.
- Designed subscription and tenant management workflows, allowing centralized Super Admin control while maintaining data segregation.
- Built configurable job posting and application workflows with optimized MySQL schema design for scalable performance.
- Developed reusable, white-label ready frontend architecture using React and Material UI to support multi-tenant customization.

Automated Web Interaction Utility

(React.js | Node.js | Express.js | MySQL | Playwright)

- Designed and implemented a browser automation utility to simulate scheduled profile activity using Playwright and Node.js.
- Handled dynamic DOM elements, login workflows, and session management to ensure consistent and reliable execution.
- Implemented retry mechanisms and delay strategies to mimic human interaction patterns and improve stability.
- Implemented configurable automation workflows with retry mechanisms and human-like interaction strategies to ensure stable execution across UI changes.
